

R. P. Delio & Company

Engineering Program Success around the globe

R.P. Delio & Company is a boutique clean energy consultancy, steeped in the pragmatic ethos of engineering business transformation. We're here to make the visionary real. We bring 30 years of full-service consultancy—encompassing engineering, procurement, construction and operations—to bear to the challenges of the new industrial age ushered in by the clean energy revolution.

Operating from our Corporate Headquarters—and National Energy Management Network Operating Center (or NOC)—in the International Trade Resource Center on the island of Oahu, Hawaii, we have been at the nexus of the information and clean energy technology transformation for over a decade.

The company has been involved in several groundbreaking projects and programs, helping to drive forward what many characterize as the “third industrial revolution.” But that transformation is far from a purely technical challenge. It involves a complex and dynamic interaction between energy policy, markets and technology—an evolving landscape that R.P. Delio & Co has proven adept at navigating.

EXCEPTIONAL VALUE FROM AN EXCEPTIONAL TEAM

In the area of information technology and energy management, R.P. Delio & Co prides itself on creating novel value streams for clients, using straightforward methodologies, sound engineering principles, and unbiased, vendor-neutral solutions—all delivered in financially compelling packages. We deploy a team fully-qualified to perform with the utmost professionalism, with extensive experience in engineering, design, and construction across many fields. The professionals helping us deliver truly exceptional value include:

- > Certified Carbon & GHG Reduction Managers
- > Certified Energy Auditors
- > Certified Energy Managers

- > Certified Energy Procurement Professionals
- > Certified Lighting Energy Professionals
- > Certified Public Accountants
- > Certified Sustainable Development Professionals
- > Electrical Contractor Licensed subcontractors
- > General Contractor Licensed subcontractors
- > Project and Program Management Professionals
- > Registered Professional Electrical Engineers
- > Registered Professional Mechanical Engineers

Our team operates from both Honolulu and our expanded operation center in Nevada. From Las Vegas we support customers across the Western Region of the U.S. The focus here is on delivering project, program and portfolio management, as well as construction management, telecommunications engineering, and secure warehousing services—securing transformation that unlocks hidden value for customers.

We achieve this through an integrated service that spans the entire energy management process—from quantifying projects with onsite monitoring and assessment, to engineering cost-modeling, and business-casing of project economics, to the constructing of real-world savings solutions. What makes the R.P. Delio team unique is that we execute all parts of the energy management process only after gaining a firm, mutual understanding of the types of investments that clients find attractive.

We can also call upon a suite of innovative proprietary technology services, developed over the last decade, which deliver new levels of openness and scalability—technology that enables organizational transformation from the micro to the global.

BRINGING ENERGY INTELLIGENCE TO THE NATION

Waypoint Power™ Platform is our open-source, locally managed, cloud-based Comprehensive Energy, Water and Carbon Emissions Management Platform. It provides accurate, actionable data that helps inform and underpin our energy transformation and sustainability efforts.

Deployed at multiple locations on-site, Waypoint Power™ feeds continuous data flows to our National Energy Management NOC, at the International Trade Resource Center in Oahu. There, it is transformed into 'energy intelligence' by our suite of analytical tools. Whether implemented as a stand-alone service, or on top of our suite of Microgrid tools, Waypoint Power™ points the way for holistically managing your energy, water and emission flows.

BUILDING THE SMART FROM THE SMALL – OUR 'MICRO-SUITE' OF MODULAR POWER SOLUTIONS

Innovative yet dependable, our microgrid technology—pairing MicroIPP™ and MicroBESS™ containerized units—consists of factory-built modular designs that are transforming the cost and delivery time for microgrid capacity. By enabling an incremental, scalable approach towards microgrid deployment, customers can seed and grow energy solutions that readily adapt to their evolving needs.

The MicroIPP™ unit is a microgrid module integrating inverters, AC power systems, and dynamic demand+supply dispatch grid controls. The MicroBESS™ unit provides a robust host to a complementary set of battery energy storage systems. Both units are fabricated to a containerized design, meaning they can then be rapidly deployed to the most challenging of locations across the globe.

DIVERSE PORTFOLIOS INTELLIGENTLY MANAGED WITH WAYPOINT POWER™
